

PHONE GRIPPER

TOOL CONNECTOR

CODE : H02039

ANSI/ISEA 121-2018 COMPLIANT

Now you can tether your phone/mobile device WITHOUT the need for a permanent or semi-permanent connection point. Used in conjunction with a load rated tether, the Phone Gripper uses purpose-built silicon to create a fully load rated mobile device tethering solution with zero impact on device operation.

Traditional mobile device tethering relies on the use of destructive adhesives directly on your mobile device, attaching a load rated ring to your mobile device that never comes off. The Phone Gripper's flexible design allows you to tether your phone 'on-demand', allowing you free use of your mobile device when operating at height.

The custom designed silicon has unique elastic and gripping properties that allows it to work with virtually any sized smartphone with both rounded or square corners, without the need of any additional adhesives.
